Rows: lead's t97_region_summary.json (358 rows; 100 touching + 204 separated pre-grasp requests; includes hurdle 211 k0 = 32 touching requests).

Bottom block '[excl. hurdle 211]': verifier recomputation with the same aggregation, hurdle 211 rows removed (t97_region_excl211.json). Lead judgment: D30.

Component-level GT class of re-attached components is not in the rows (only node counts per class) and is not reported.
